ALFRESCO HOME

Jasper
Lightweight
Concrete
Dining Table

Product Description: The spectacular Jasper Dining Table Collection by Alfresco Home is constructed of a proprietary blend of material surrounding light weight concrete fiber reinforced cement board and hand-finished sealants. Architecturally developed materials are also utilized in façade paneling and decorates exterior walls due to its high-tech integrity. Jasper is durable, resilient, stable and withstands the elements. As a tabletop, the tech material and its construction provides performance unlike other resin-like composite materials. The cool, elegant, grey tone Lava finish, accented with an edgy black aluminum base and frame, provides an extremely distinctive, chic look. The Jasper table is available in 71" dining, 95" dining and 59" gathering heights. All tables come with an umbrella hole and cap.

Operational/Functional Aspects:

Colors of Finishes Available:

Frame: Black
Top: Lava

TELESCOPE CASUAL FURNITURE

Origins Solid
Surface Acrylic
42" x 94" Table

Product Description: Our Origins Table Collection features 10 unique tables (including fire tables), but most prominent is our 42"x84" rectangle table available in three heights; dining, balcony and bar. The table features a durable powder coated aluminum frame, supporting a beautiful one-piece Avonite Solid Surface Acrylic top. Solid Surface Acrylic has been around for generations, but only in narrow stock made for the countertop trade. Acrylic is a known outdoor performer. Now combined as never before, our extra wide material allows for a beautiful one-piece top with no seams to collect dirt or grime. The non-porous, heat resistant Solid surface Acrylic is 68% denser compared to our already high-density Marine Grade Polymer, and over 4 times stiffer. Made entirely in the USA!

Operational/Functional Aspects: The one-piece top construction allows for uninterrupted sight lines across the rich, dimensional polished stone-like surface. We offer a trendy polished concrete as well as two natural stone looks, combined with 10 frame colors. The chemical-resistant, non-porous surface is bacteriostatic and inhibits the growth of germs, mold, or dangerous pathogens naturally. The durable, hard surface continues as a homogeneous material with color and pattern going completely through the material so the surface can be repaired, if the need arises, protecting your investment.

Colors of Finishes Available:

Combine 3 Avonite Solid Surface Acrylic top colors with 10 powdercoat aluminum frame colors
